

HTML Part 1

More Attributes

Below is a table of different common attributes and what tags they apply to. You may see some that are considered Global Attributes, which means they can be used with any tag.

Attribute	Applicable Tags	Description
id	Global	Provides a unique id so it can be located
lang	Global	Specifies the language of the elements content
spellcheck	Global	Specifies if the element needs to have its spelling and grammar checked
style	Global	Specifies the CSS styles that determine the look of an element
class	Global	References a predefined set of looks and feels to be applied to an element
checked	<input>	Specifies that an input element will be pre-selected when a user lands on the page
href	<a>, <link>	Specifies the URL of the page that the link goes to
required	<input>, <select>, <textarea>	Specifies that the element must be filled out before submitting a form
type	<button>, <input>, <link>, <script>	Specifies the type of the element to display. The default type is text
value	<button>, <input>, <link>, <script>, , <option>	Specifies the initial value of the element

Additional Info!

There are many attributes you will use. For more information go to: [MDN Attributes](https://developer.mozilla.org/en-US/docs/Web/HTML/Attributes) (<https://developer.mozilla.org/en-US/docs/Web/HTML/Attributes>).
